1. Business requirements: Build a simple restful API system (**just Backend, no requires frontend**) to **allow users able to CRUD locations**.
2. Technical requirements:
   - Database design: have to support **the address location tree** (PostgreSQL + TypeORM require).

- Build with **NodeJS** (**NestJS** (https://docs.nestjs.com) + **TypeScript)**.
- Validation request
- Handle exception.
- Implement Logging.
- Clean code and documentation for your project.
